

WARREN HILLS ENVIROMENTAL AWARENESS CENTER

Fishing and bird-watching introduced as part of socio-economic activities.
KEY SECTION T-T

Project thesis: Habitat creation

Located corner Princess and Sherwood drive, the site is a marshy area and it has an ecological significance and also promote character of the area. The project thesis revolves around creating a habitat for a lemur, an African animal which is commonly known to protect its territory. The incorporation of this animal protects the environment from unsustainable use of environmental resources such as grass reeds where the birds live, not only does it destroy the habitats for the birds, the cutting of these reeds also promotes deforestation which has resulted in drying of the river thereby discontinuing the ecosystem.

International Union for Nature Conservation

Agrees that all Lemur species may be extinct within the next 20 years...
